SUMMARY

Data Engineer with over 4 years of experience building scalable data pipelines and cloud-based analytics solutions. Skilled in Snowflake, AWS, GCP, Apache Airflow and dbt. Currently pursuing a Master's in Data Analytics, with hands-on projects in big data modeling, ETL automation, and scalable dashboarding ([Github](#)).

SKILLS

Cloud & Data Platforms: Snowflake, AWS, GCP

Data Engineering & Workflow Tools: Data Modeling, Dimensional Modeling, ETL/ELT, dbt, Apache Airflow, Apache Spark, Confluent Kafka, Jenkins, RDBMS, Hadoop

Programming & Scripting: Python, SQL, R, Java

Data Analytics & Visualization: Tableau, Data Analysis, Machine Learning

Other tools & Practices: Git/GitHub, CI/CD, Agile Methodologies

EXPERIENCE

Happiest Minds, Pune, India

Aug 2023 - Dec 2024

Data Engineer

Project 2: Retail Domain

Feb 2024 - Dec 2024

*Modeled and processed large-scale retail data to enable advanced analytics and reporting solutions for tracking over **100,000 orders**, **50+ KPIs** and scorecards.*

- Designed and optimized normalized and dimensional data models in **Snowflake**, improving query performance and reducing storage and processing costs by 25%.
- Constructed ELT pipelines (**Confluent Kafka** → **AWS S3** → **Snowflake**) to ingest and process data from **8+ data sources**, processing **~100,000** records daily, improving reporting latency by 30% and ensuring 99.9% uptime.
- Implemented a robust **job orchestration system using Airflow**, ensuring **99.9%** uptime and the reliable operations of data pipelines. Performed comprehensive data validation checks, ensuring the data integrity and >98% accuracy.
- Wrote advanced **stored procedures** to flatten complex JSON data, reducing query complexity by 40% and optimize for analytical reporting. Used **GitHub** for version control, enabling seamless collaboration and CI/CD integration.

Project 1: Online Traffic and Engagement Data

Aug 2023 - Feb 2024

*Managed audience traffic and engagement data across websites, social media and newsletters. Built analytics platforms and automated customer journey reports to drive insights leading to a **30% increase in engagement**.*

- Built a **100% serverless, near real-time data pipeline** using **Google Cloud Function** to extract, transform, and process 250–500 records per hour generating user path journey reports, and storing the output in **Google Cloud Storage** for downstream access.
- Tracked website audience using **Google Analytics 4 (GA4)** and ingested event-level data into **BigQuery** for analysis.
- Automated the report generation process, reducing the **operational costs by 50%** and eliminating manual efforts.

Accenture, Pune, India

Jan 2021 - Aug 2023

Data Engineering Analyst

Hired as Associate Software Engineer and promoted to Data Engineering Analyst in 1 year. Analyzed demographic, ad campaigns logs, audience data and set up a Big Data Analytics Platform for our client.

- Designed and implemented a **Snowflake ETL workflow using Streams and Tasks**, handling over **3.3 million** audience records per month and maintaining history via **SCD Type 2**, supporting accurate calculation of Reach, Impressions, CPM and other key indicators for across 50+ past Ad Campaigns.
- Engineered a **Jenkins pipeline** to split large .csv.gz files over **15GB** into smaller chunks for efficient ingestion via **Snowpipe**, reducing average load time by 25%.
- Led successful migration of **over 100 GB data** and legacy data model from **AWS to Snowflake**, ensuring backward compatibility while enabling scalable analytics on demographic and ad campaign data.
- Collaborated with cross-functional teams for a POC project on customer segmentation based on demographic data.

EDUCATION

Master of Science - Data Analytics

Jan 2025 - May 2026

University of Illinois, Springfield

Bachelor of Engineering - Electronics & Telecommunication (E&TC)

May 2016 - Apr 2020

MIT College of Engineering, Pune

PERSONAL PROJECTS

NYC Taxi Data Analysis ([Repository](#)) | ([Dashboard](#))

Built end-to-end data pipeline to analyze 3.1M NYC Taxi trips (**AWS Lambda + Snowflake + dbt**), delivering **Tableau** dashboards for trip demand forecasting and fare insights.
